Upton, April 2013 - On Thursday, April 11, 2013, Legislator Anker joined elected officials, representatives from the Department of Energy, Brookhaven Science Associates, and members of the Brookhaven Lab community for a dedication ceremony for the new Interdisciplinary Science Building (ISB) at Brookhaven National Laboratory.

The ISB is an 87,700 square foot world-class research facility with 21st century, high accuracy laboratories for energy-related research and development. Through multi-disciplinary collaboration, researchers can focus on breakthroughs in the effective use of renewable resources.

“As a member of the Brookhaven Executive Roundtable, I’m pleased to see the ISB come to fruition,” said Legislator Anker. “This state-of-the-art research facility will support scientists as they focus on energy related research to address the nation’s energy challenges,” said Anker. “The building itself is a shining example of sustainable development and energy efficiency.”
