

Babylon 2018 - Tick Infection Rates Collection site is located within the 11704 zip code				
Infection Rate (%)	Pathogen	Disease	Stage	Tick
50	<i>B. burgdorferi</i>	Lyme Disease	Adult	Blacklegged Tick
5.9	<i>B. microti</i>	Babesiosis	Adult	Blacklegged Tick
5.9	<i>B. miyamotoi</i>	Relapsing Fever	Adult	Blacklegged Tick

*While nymphal ticks often have lower infection rates than adult ticks, they are typically responsible for causing more disease in humans, as their smaller size allows them to avoid notice

**Nymphal blacklegged ticks and Lone Star ticks were not collected from this site
