RE: Proposed Rehabilitation of Riverhead County Center's Sewers, Pumping Station and Force Main, CP 8142 Towns of Riverhead and Southampton.

Enclosed is an Environmental Assessment Form for the above referenced County project which has been submitted to the Council on Environmental Quality (CEQ) for review. Pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, the CEQ must recommend a SEQRA classification for the action and determine whether it may have a significant adverse impact on the environment which would require the preparation of a Draft Environmental Impact Statement (DEIS).

The Council would like to know your environmental concerns regarding this proposal and whether you think a DEIS or a determination of non-significance is warranted. This project will be discussed at the **January 20, 2016** CEQ meeting. If you are unable to attend the meeting to present your views, please forward any recommendations or criticisms to this office prior the date of the meeting. **If the Council has not heard from you by the meeting date, they will assume that you feel that the action will not have significant adverse environmental impacts and should proceed accordingly.**

SUBJECT: **Riverhead County Center Pumping Station, CP 8142**

DATE: January 4, 2016

Attached is a short EAF for the referenced sewers, pumping station, and force main. The service area is the Riverhead County Center with discharge to the Riverhead Sewer District. There is the need to be proactive with respect to this sewer infrastructure. Not all locations of work on the force main and sewers have been identified with respect to the need for improvement, but many of the areas have sewer pipe which is subject to corrosion and failure. All work would be confined to replacement in-kind of the facilities located on the County Center site and along with the force main from the pumping station. The adopted capital budget includes \$250,000 to address these problems. Pictures are attached of the pump station and a map of the force main route.

The referenced project is to continue a multi-year program to enhance the safety and security measures at the various County sewerage facilities including treatment plants and pumping stations. Consultant assistance may be provided to develop the plans and specifications. Equipment will be installed by DPW staff where possible. It is anticipated that the facilities require replacement in-kind of failing fencing and building elements along with installation of auxiliary equipment (e.g., fire alarms, video surveillance, and emergency generators. A similar request in 2006 resulted in Resolution 638-06 for the majority of work and Resolution 996-13 addressed emergency generators. It is possible that over the next few years each district will have issues addressed with all work being consistent with 6 NYCRR, Part 617.5 (c), (1), (2), (20), (25), and (27). A short EAF is attached with pictures of typical pump station sites. We are available to present the focus of the project at your upcoming meeting.

Capital Project 8178
Improvement to Suffolk County Sewer Districts
Chemical Bulk Storage Facilities
Summary

Suffolk County DPW, Division of Sanitation, operates and maintains twenty-two sewage treatment plants and nearly 90 pumping stations. The facilities are located between Westhampton, Huntington, and Babylon. A need exists to continue compliance with 6 NYCRR, Parts 595-599, with respect to Chemical Bulk Storage Facilities (CBS).

The regulations require that each facility receiving specified chemicals must have available a secondary containment structure, must be properly registered, and must insure that environmental audits and inspections are done within the prescribed time frame.

The secondary containment compliance issue requires construction at each individual chemical delivery point and involves a structure with a pre-determined volume to insure spillage is captured, if it occurs. Most sewer districts need an off-loading installed or upgraded with low or no environmental impact. The secondary containment is usually a 12-18 inch wall around the tank with a perimeter of approximately 10 feet square. Engineering assistance may be required for this task as well as evaluating the registration and environmental audit requirements to become and remain in compliance. Work has continued since 2003 with some tasks to be addressed.
